

Why writing....

Chris Tong

add dating -Writing practice

-Pedagogical practice/getting unique thoughts/things out of my head

-Decent broad experience in a lot of different fields of chem, math, phys. Combine languages together - hopefully everyone can learn something

-Taking more control of my internet presence

-Developing a writing style: textbook like things that are casually readable (goes with pedagogy)

Also add some self reflection - you also make some arbitrary choices of what to assume and what to demonstrate. However I hope that by assuming less there is some additional insight that can be brought to the main topic of discussion while the things that are assumed are pretty fundamental and associated proofs do not really contribute toward my goal. Be more transparent with what is assumed

1 Some specific remarks on the paper

Assumptions: -thermalization postulate

-Empirical temperature scale

How does it fall into your writing goal

Hopefully not too tedious

Welcoming feedback
